Henglong Liang

ALong / AI Engineer

1458169154@qq.com · github.com/Blooming-LHL

I'm Henglong Liang, an AI Engineer in OPPO's Enterprise AI Department. I focus on LLM applications, multi-agent systems, and backend engineering—turning model capabilities into useful, reliable software.

Experience

OPPO · Enterprise AI Department · AI Engineer Jul 2026 — Present

Alibaba Cloud · Infrastructure Software Engineer Intern May — Sep 2025

Engineering in practice

DBStack Resource Planning Agent 2025 · Alibaba Cloud

My contribution: Within a jointly developed project, designed and implemented the ReAct multi-agent system and the MCP Server connecting agents to planning services.

Outcome: Received the Popularity Award and Outstanding Project recognition in the Yaochi Database AI Innovation Challenge.

`LLM · ReAct · Multi-agent · MCP`

DBStack Presales Resource Planner 2025 · Alibaba Cloud

My contribution: Integrated installation dry runs, simulated resource scheduling using KWOK and the native scheduler, and implemented asynchronous evaluations with Kubernetes Jobs.

Outcome: The system reduced evaluation time from hours to minutes, simulating resource scheduling without starting real application containers.

`Kubernetes · KWOK · K8s Job · Dry-run`

Education

Sun Yat-sen University · Graduate Studies · Computer Technology Sep 2023 — Jun 2026

Top 10% in graduate studies; admitted through the postgraduate recommendation pathway. University second-class scholarship in 2023 and first-class scholarships in 2024 and 2025.

South China University of Technology · Undergraduate Studies · Information Engineering Sep 2019 — Jun 2023

Top 10% in undergraduate studies. Huawei Intelligent Base scholarship (2022); Second Prize in the Mathematical Contest in Modeling (2021). Served as class representative and led the Baibuti student organization's visual design team.

> **Research:** 3 Patents (First student author on each); 1 CCF A paper (Second student author); 1 International conference paper (First student author).

Technical skills

LLM Applications: LLM / ReAct / Multi-agent / MCP / MCP Server. Router and specialist agent collaboration, conversational configuration guidance, and MCP tools for validation, planning execution, and result retrieval.

Backend Engineering: Java / JVM / MySQL / Redis. Java collections and concurrency; JVM memory model, class loading, and garbage collection. MySQL transactions, indexes, and MVCC; Redis data structures, caching scenarios, and common cache failure patterns.

Cloud Infrastructure: Kubernetes / kubectl / Docker / KWOK / K8s Job. Kubernetes deployment and container troubleshooting, virtual-cluster scheduling simulation, and asynchronous task execution using Jobs and multi-container Pods.

Engineering Toolkit: Git / Postman / Proxyman / DBeaver / Navicat. API testing, network debugging, and database tools. Passed China's College English Test, Band 6 (CET-6).
